

THE EATA VISION

In EATA, the automotive and telecoms sectors come together to jointly explore how best to accelerate the rollout of connected & automated driving in Europe to the benefit of European consumers, businesses and society.

EATA will make Europe a leader in future mobility by leveraging the Digital Single Market to make every vehicle fully connected and automated.

To deliver the next level of advanced, automated driving with seamless connectivity, EATA members are joining forces to:

- Address the regulatory & legislative obstacles that hinder Europe from becoming one single market for connected and automated driving.
- Identify testing and demonstration projects that will advance connected and automated driving in Europe, especially across borders.
- Mobilise public funding for research and testing in Europe
- Proactively engage in dialogue with international, European and national policy makers to address concerns and jointly manage novel issues shaping the future of connected and automated driving.
